DYNAMIC IP'S MADE EASY

Are you Lost in the Internet Wilderness?

Are you Tired of Using Numbers that Never Work?

Does your IP Address change Faster than the Weather?

PRESENTING

EAGLE IP'S

A NEW SERVICE FROM EAGLE EYE DVR

Internet Service Providers often use some kind of Dynamic Internet Protocol (IP) addressing for most standard business and residential accounts. IP Addresses are how computers around the world find and communicate with each other. However, Dynamic IP's change - often frequently.

This means connecting to your business or home over the Internet to check your Eagle Eye DVR security system - or anything else for that matter - can be difficult, or worse... expensive.

Now, Eagle Eye can help with a new service, called Eagle IP's.

Using the Eagle Eye web site as a portal, we can configure your DVR with the software needed to track the frequent IP Address changes imposed by most ISPs.

This means connecting to your business or home can now be as easy as opening a web page.

Safe and reliable. Eagle IP's. Now Available from Eagle Eye DVR. See your DVR Sales Rep for more details.

Single DVR setups are only \$100 for two years (includes software)

Multiple DVR setups are only \$150 plus \$10 per site beyond the first, for two years (includes software + HTML link page)
